

Supertransactions & MEEs

Mislav Javor, VP Product @ Biconomy

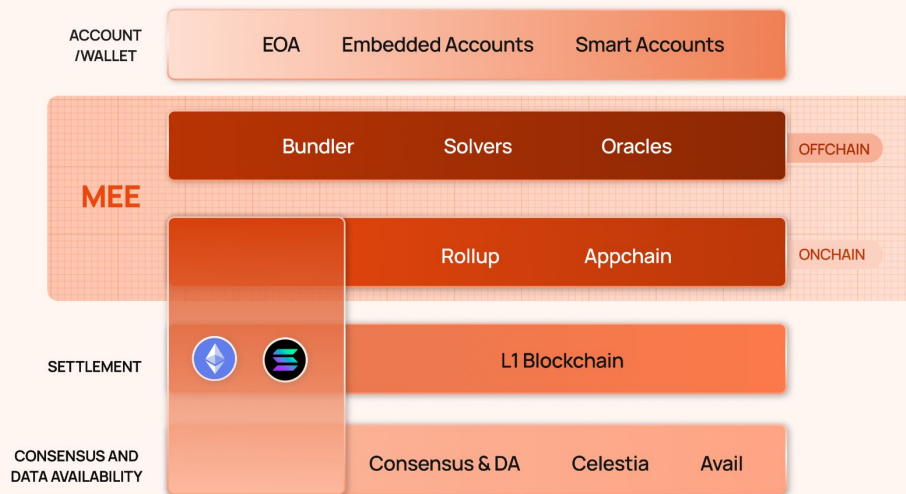

Monolithic Execution

- **Unicast**: One environment can send to one blockchain only
- **Isomorphic**: One environment understands only one type of object
- **Signature-Scheme-Coupled**: One environment uses one signature scheme
- **Non-Composable**: Can't presign output of one tx as input of the next one
- **Non-Collaborative**: Nodes can't collaborate to fulfil user intents.

🌟 Modular 🌟 Execution
