

A large, faint, teal-colored diamond shape with internal geometric patterns serves as a background for the central text.

TXAIN.COM

Discover the Next Generation of Blockchain Exploration

Daniel Perez

Co-founder, txain

TXAIN today

- Key Features
 - Smart Contract Verification
 - NFT & ERC-20 Token Data
 - Internal complex transactions
 - etc...
- Ready for any EVM compatible chain and currently Developed On:
 - Ethereum Mainnet & Sepolia
 - Polygon zkEVM & Cardona

Why not many explorers in the space?

Running Your Own Explorer

- Requires deep technical expertise
- Significant infrastructure investment

**Specialised explorers are the
key for blockchain adoption**

Specialized explorers

- Purpose-built explorers are essential for driving adoption and user trust and engagement.
- We are focused on creating highly specialized explorers that require tailored solutions for different use cases:
 - Defi
 - NFTs
 - ERC-20
 - Gaming
 - Payments

Next steps

- “Centralized vs. Decentralized”
- “Trustless Data Sources”
- “Build Solutions on Trustless Infrastructure”

**We need to move to a
decentralised data source
model**

A large, faint, teal-colored Ethereum logo is centered in the background of the slide. It is a diamond shape composed of many smaller, overlapping triangles, creating a complex, crystalline structure.

Thank you!
